

EXTREME

EB02.008

The Elite EXTREME'S is designed with needs of those involved with basic life support (BLS), but it makes an equally excellent bag for other demanding emergency first response situations. Its high capacity internal compartment can be honeycombed using removable and configurable padded dividers, allowing the user organise and securely stow a wide range of essential emergency medical materials. Four, clear-fronted, zip sealed, removable pouches, are excellent for the clean storage of medical materials, allowing contents to be viewed even when closed. Internationally recognised medical colour coding also reduces the time taken to locate the correct critical materials in emergency situations. A reinforced base and tough, durable build quality this bag will protect contents and cope with the most demanding environments. Heavy duty steel D-rings provide coupling points during air evacuations and for attaching the padded shoulder straps.

Features

- Padded handle reduces hand fatigue when full.
- Reflective night/day high visibility strips on exterior.
- Reflective parachutist glow in the dark rope handles.
- Steel D-rings for air transport descents.
- Oxygen tube extraction grommet (for use with disposable oxygen bottles).
- Cardholder.
- Removable backpack shoulder straps.
- Two, high capacity external pockets with elastic strapping and pockets with transparent windows.
- Main interior compartment is configurable using the padded Velcro dividers.
- Reinforced base.
- Four removable, colour coded pouches with transparent fronts.
- Isothermal ampoule case with capacity for 27 vials.
- Velcro Cross of Life and identifiers.
