

MODULE - BLACK

MB11.017

Compact backpack designed for tactical and operational medical professionals working in confined spaces. It provides immediate access to its interior, enabling effective and rapid delivery of life-support treatments. Each unit features a buckle connection system, allowing multiple backpacks to be linked together, thereby creating a larger unit with greater depth and capacity.

Features

- Padded product to protect contents from impact.
- Ability to link multiple units together, creating a single larger backpack.
- Large zippers with oversized pulls (reflective in model EB02.071) for easier identification and opening.
- Front and side MOLLE system.
- Low-profile handles on the top and front.
- Removable customizable panel on the front.
- Rings on the top and auxiliary backpack straps.
- Large-capacity rear pocket made of mesh.
- Strap system with chest support, hidden and detachable.
- Hip belt and straps concealed within the back panel.
- All straps feature a retention system to manage excess length.
- Behind the front panel of the main compartment, there are two flat mesh pockets and a removable panel with elastic bands of various sizes on one side and a large flat pocket on the other.
- Features four large compartments with ventilation and internal elastic bands to secure materials (in model EB02.071, these compartments have international color coding).
- Open pocket located in the bottom area.
