

RESCUE'S DOG

EB03.003

The maritime rescue harness vest, is a piece of specialised safety equipment designed for rescue dogs in aquatic environments. Made from durable and comfortable materials, this harness is crafted to ensure the safety and comfort of the animal during rescue operations.

Its design includes reflective markers (green or red) to indicate the dog's direction, a MOLLE system on the lower front section to secure a canine airbag, and rings for helicopter descents or guiding the animal. It also features a glow-in-the-dark cord for visibility during descents and concealed lateral MOLLE systems beneath the reflectors for attaching flashlights, position lights, first aid kit EB08.014, and more.

The back of the harness includes a loop that can be released in emergencies to prevent harm to the dog, rescuer, or person being rescued.

The upper section is made of water-resistant polyester, while the lower section is crafted from high-quality neoprene, providing a soft and comfortable contact for the animal. The harness also features durable, reinforced handles.

Features

- Material: Upper part made of durable polyester; lower part made of neoprene for comfortable contact with the animal.
- Adjustable Size: Fits dogs of various sizes.
- MOLLE System: Allows for the addition and securing of a canine airbag for enhanced safety during water rescues.
- Reflective Elements: Red and green reflective bands to improve visibility and indicate the dog's direction in the water.
- Descent Rings: Includes strategically placed rings for helicopter descents and a glow-in-the-dark cord for locating the dog on cloudy days or at night.
- Safety and Comfort: Designed to maintain the dog's stability and comfort at all times.
